# Preface

RNA interference (RNAi), in which RNA silences RNA, is the most recent discovery to revolutionize biology and to be recognized by a Nobel Prize (in 2006, to Andrew Fire and Craig Mello). It is a story that began with historic observations in plants and fungi and eventually worked its way up to humans. If one were to describe the major steps of RNAi very briefly, it would read as follows: RNAi is triggered by double-stranded RNA (dsRNA), produced endogenously or introduced by scientists → Long dsRNA is trimmed into short interfering RNA or microRNA (siRNA or miRNA) by Dicer → The individual strands of the si/miRNA then guide the assembly of a multiprotein complex, known as RISC, the key constituent of which is Argonaute → Depending on the extent of homology of the guide RNA to the target, RISC either destroys the target RNA or suppresses its translation, leading to gene silencing.

The chapters in *RNAi: Design and Application*, contributed by leaders in the field, sum up the state-of-the-art methods on practical, everyday use of RNAi in biological research. Although multiple books and monographs have been published on RNAi, there is a noticeable dearth of bench protocols that can be used quickly and easily by beginners aspiring to enter this new field. This volume aims to fill that void.

*RNAi: Design and Application* is divided into two parts. The first and smaller part (chapters 1–4) covers the fundamentals including designs of RNAi, biochemical assay protocols for the major components of RNAi, and study of potential off-target effects. The larger second part (chapters 5–18) covers various applications of RNAi in diverse model organisms and systems, from antiviral and anticancer applications to altering flower color in plants. Armed with this volume, a researcher with standard molecular biological training should be able to perform today's major RNAi-related experiments and carry out gene knock-down analyses in virtually any cell line or species of interest. In the established tradition of the *Methods in Molecular Biology*<sup>TM</sup> series, each chapter contains step-by-step protocols, extra notes, and problem-solving tips, which are usually not found in original research papers. As the horizon of RNAi application is rapidly broadening, we have strived to offer the most recent protocols in each area so that they remain useful for years to come.

My sincere thanks go to all the authors and the Humana staff for bringing it all together, and to Professor John M. Walker for his guidance. I remain indebted to my wife, Kumkum, and my children, Titus and Tiasha, for their immeasurable support and encouragement.

***Sailen Barik***

# Contents

Preface .....	vii
Contributors .....	xi

**PART I: DESIGNING OPTIMAL RNAi TOOLS**

1. Principles of Dicer Substrate (D-siRNA) Design and Function <i>Mohammed Amarzguioui and John J. Rossi</i> .....	3
2. Expression, Purification, and Analysis of Recombinant <i>Drosophila</i> Dicer-1 and Dicer-2 Enzymes <i>Xuecheng Ye and Qinghua Liu</i> .....	11
3. <i>In vitro</i> RNA Cleavage Assay for Argonaute-Family Proteins <i>Keita Miyoshi, Hiroshi Uejima, Tomoko Nagami-Okada, Haruhiko Siomi, and Mikiko C. Siomi</i> .....	29
4. Identifying siRNA-Induced Off-Targets by Microarray Analysis <i>Emily Anderson, Queta Boese, Anastasia Khvorova, and Jon Karpilow</i> .....	45

**PART II: APPLICATION OF RNAi IN DIVERSE ORGANISMS**

5. Hydrodynamic Delivery of siRNA in a Mouse Model of Sepsis <i>Doreen E. Wesche-Soldato, Joanne Lomas-Neira, Mario Perl, Chun-Shiang Chung, and Alfred Ayala</i> .....	67
6. Nasal Delivery of siRNA <i>Vira Bitko and Sainen Barik</i> .....	75
7. RNA Interference as a Genetic Tool in Trypanosomes <i>Vivian Bellofatto and Jennifer B. Palenchar</i> .....	83
8. Lentivirus-Mediated RNA Interference in Mammalian Neurons <i>Scott Q. Harper and Pedro Gonzalez-Alegre</i> .....	95
9. Silencing Genes by RNA Interference in the Protozoan Parasite <i>Entamoeba histolytica</i> <i>Carlos F. Solis and Nancy Guillén</i> .....	113

10.	Use of RNAi in <i>C. elegans</i> <b><i>Tsuyoshi Ohkumo, Chikahide Masutani, Toshihiko Eki, and Fumio Hanaoka</i></b> .....	129
11.	Application of siRNA Against SARS in the Rhesus Macaque Model <b><i>Qingquan Tang, Baojian Li, Martin Woodle, and Patrick Y. Lu</i></b> .....	139
12.	siRNA and shRNA as Anticancer Agents in a Cervical Cancer Model <b><i>Wenyi Gu, Lisa Putral, and Nigel McMillan</i></b> .....	159
13.	Identification and Expression Analysis of Small RNAs During Development <b><i>Toshiaki Watanabe, Hiroshi Imai, and Naojiro Minami</i></b> .....	173
14.	Screening and Identification of Virus-Encoded RNA Silencing Suppressors <b><i>Sumona Karjee, Mohammad Nurul Islam, and Sunil K. Mukherjee</i></b> .....	187
15.	Application of RNA Interference in Functional Genomics Studies of a Social Insect <b><i>Michael E. Scharf, Xuguo Zhou, and Margaret A. Schwinghammer</i></b> .....	205
16.	Temporal Control of Gene Silencing by <i>in ovo</i> Electroporation <b><i>Thomas Baeriswyl, Olivier Mauti, and Esther T. Stoeckli</i></b> .....	231
17.	Altering Flower Color in Transgenic Plants by RNAi-Mediated Engineering of Flavonoid Biosynthetic Pathway <b><i>Yoshikazu Tanaka, Noriko Nakamura, and Junichi Togami</i></b> .....	245
18.	Transgenic RNA Interference in Mice <b><i>Pumin Zhang</i></b> .....	259
Index	.....	267
